

## REMARKS

The claims have been amended to call for a phase change material including Tellurium. The materials described in the Moore reference do not have Tellurium. See column 3, lines 8-10 and column 3, line 35.

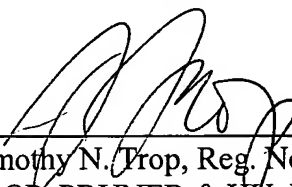

It is respectfully submitted that the Moore patent may not, in fact, be a phase change material, although it is not clear. Apparently, the way that the cell is programmed is to cause silver ions to form dendrites in the material 51. Thus, it is not seen how there is any phase change operation.

However, to further make sure that the difference is clear, claim 11 has been amended to call for a phase change material including Tellurium. Since the reference does not teach such a material and probably does not teach a phase change material, the application should now be in condition for allowance.
